DIS Sensors B.V.

Material Compliance Statement – RoHS & REACH (SVHC)

Document ID	DIS-COMP-STAT-ROHS-REACH-2026-01
Version	1.3
Status	Approved
Effective date	21 April 2026
Classification	External
Document owner	Procurement / Compliance (DIS Sensors)
Approved by	Mark Dorrestein – Managing Director
Issued by	DIS Sensors B.V., Oostergracht 40, 3763 LZ Soest, The Netherlands

1. Purpose & scope

This statement describes the approach of DIS Sensors B.V. to EU material compliance and applies to products supplied by DIS Sensors B.V., unless explicitly agreed otherwise with customers.

Role of DIS Sensors (assembly/manufacturing scope)

DIS Sensors B.V. manufactures finished products by assembling and integrating commercially available components and materials sourced from qualified suppliers. DIS Sensors does not manufacture basic chemical substances, raw materials, or elementary components (e.g., metals, polymers, electronic dies). Material compliance is therefore managed through structured supplier controls, supplier declarations and internal monitoring.

2. Regulatory framework

DIS Sensors monitors and applies relevant European product legislation, including RoHS Directive 2011/65/EU and its amendments (including (EU) 2015/863) and REACH Regulation (EC) No 1907/2006.

3. Compliance assurance

Compliance is supported by supplier qualification, collection and retention of supplier declarations, and maintenance of internal compliance registers. Evidence is retained in accordance with internal document control practices.

4. RoHS compliance & exemptions

Products are intended to comply with RoHS substance restrictions. Where technically unavoidable, certain components may rely on legally permitted RoHS Annex III exemptions, including lead-related exemptions in categories 6 and 7. Exemptions under review remain valid until a formal EU decision is adopted.

5. REACH (SVHC / Article 33)

DIS Sensors maintains a process to collect and manage supply chain information related to Substances of Very High Concern (SVHC). Where Article 33 communication obligations apply, DIS Sensors will provide the required information to customers upon request, based on the information reasonably available from the supply chain.

6. Change management

DIS Sensors actively monitors regulatory updates and exemption expiry/renewal status and assesses potential impact on products and customer requirements.

7. Disclaimer

This statement is issued in good faith and reflects information reasonably available at the time of issue. It does not replace customer-specific part-level declarations where contractually required.
